## A New Vision for Sugar

## The Home of Rare Sugar - Miki

Presents by Kagawa Pref.

As its name suggests, a rare sugar is a type of sugar only found to occur in very small quantities, thought to amount to around 50 different varieties. Researchers at the Agriculture Department of Kagawa University succeeded in finding ways to mass-produce this fine type of sugar, the most revealing of which being the possibility to change fructose that you can find at any supermarket into D-psicose. Up until now, psicose was only produced in small quantities through organic chemistry methods, making 1 gram worth 70,000 yen. With these discoveries making its production a much easier feat, these rare gems will now be much closer within your reach.
